

AMC

Comprehensive Solution

Virtual & physical integration.

**Digital Twins
Smart Inspection
AI Recognition**

Discover our cutting-edge AI-powered solution for smart inspection and equipment maintenance, ushering in a new era of factory asset management. Real-time detection and integrated maintenance data enhance inspection efficiency and optimize equipment performance for your factory.

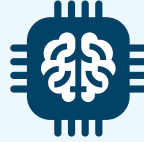

AMC

One-stop solution to fulfill all your digital asset management and inspection needs.

With a mobile device in hand, you have everything you need for online smart inspections in one place

Real-time AI analysis of image data, easy process control, and no room for human error.

Easily integrates with Rockwell Automation's equipment maintenance system, Fiix, enabling one-click connection to related work orders and eliminating the need for repetitive queries.

Efficiently manage factory assets through digital twins

A single platform links all 3D models, point cloud data, and engineering drawings.

Visualized management and search, intuitive and convenient, improving efficiency.

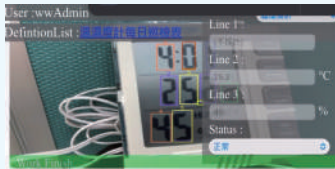

Able to integrate with Rockwell Automation's equipment maintenance system, Fiix, one-click connection to the corresponding work orders, eliminating the need for repetitive queries.

Smart inspections integrated with AI recognition and automatic alert notifications.

Combined with smart inspection system, offering both web-based and app functionality, enabling paperless inspections. Automatically generates inspection reports, eliminating the need for organizing by personnel.

With Solomon's AI visual recognition technology, use a handheld device to capture instrument data, instantly interpret readings, and upload accurate data to the inspection system.

If abnormal inspection results or system anomalies are detected, relevant personnel will receive automatic notifications via LINE and Email, ensuring comprehensive communication through multiple channels.
